

Features of anti-jamming valves

SOFT TURN ANTI-JAMMING VALVE

Like the whole range of Teco products dedicated to conveying water, the **Ultra** and **164** valves are equipped with a shut-off assembly, which ensures a low operating torque that remains constant over time, known as "Soft Turn".

The combination of engineered polymer balls and specially designed seals ensures correct operation that is always soft in the event of emergency or when carrying out maintenance on the system.

BENEFITS

- PPSU ball and anti-jamming seals.
- Resistance to abrasion by impurities (sand).
- 100% compatible with drinking water.
- No water stagnation (DVGW W570).
- Chlorine resistant.

FULL FLOW

TECO full flow ball valves have a flow rate in line with EN 806-2: Paragraph 6.1.

BENEFITS

- They have a low pressure drop.
- They can replace screw valves, as recommended by **EN 806-2**.

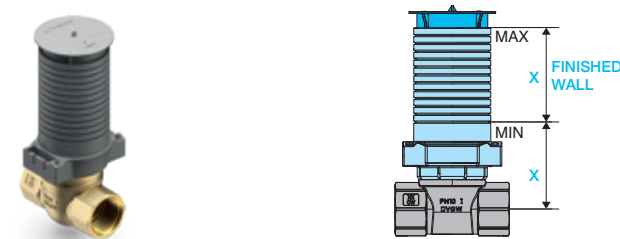

THE SPARE PART THAT RENEWS THE TOP ENTRY VALVE

Thanks to the removable ball, all 164 valves manufactured since 1987 can be upgraded with the latest design accessories and technology: anti-jamming and "Soft Turn".

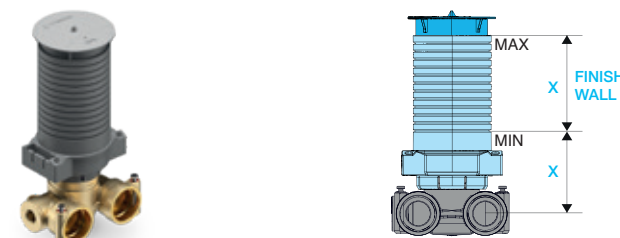

ULTRA®

ULTRA threaded / Fastec version
